

The Unique Collection allows you to give your rods all the support they need, without compromising their operation. Whether your design will incorporate one-way draw or split draw, the collection's bypass brackets allow our special "C" rings to traverse the full length of the rod with no worries.

They're perfect for very wide windows or even over doors. You can use them as a single or double rod system. And because they're available in Orion's 35 Iron Art finishes, 6 Italian finishes, or your own custom finish, you'll always create a match for any style.

The Unique Collection comprises a "C" ring, end brackets for single or double rod systems, and support brackets for single or double rod systems. Single rod brackets are available in 3" or 6" projections. For use with straight round hollow rods only, in diameters from 3/4" to 3". Available in 35 Iron Art finishes, 6 Italian finishes, or your own custom finish.
